EDUCATION

Antonine University

Bachelor of Science in Computer Science

Baabda, Lebanon

Nov 2023 – May 2026

Samsung Innovation Campus

AI and Programming Training

Beirut, Lebanon

Aug 2025 – Oct 2025

EXPERIENCE

Software Engineer

GUADA.ai

Beirut, Lebanon

May 2026 – Present

- Design and develop software and AI-powered solutions for clients across various industries, handling both backend logic and system integration.
- Collaborate with cross-functional teams to translate client requirements into scalable, maintainable technical deliverables.
- Contribute to the full development lifecycle, from architecture and implementation to testing and deployment.

Research Intern

GeoAI

Remote

Nov 2025 – Apr 2026

- Conducting research on **remote sensing and land cover classification** using **Sentinel-2** multispectral satellite imagery.
- Developing a **cropland mask generation pipeline for Lebanon**, applying deep learning segmentation models to identify and delineate agricultural land at scale.
- Working with geospatial data processing tools and libraries to handle, preprocess, and visualize large-scale satellite datasets.

AI Capstone Project Lead – KindStep

Samsung Innovation Campus – Team AiVengers

Beirut, Lebanon

Sep 2025 – Oct 2025

- Co-led a team of 6 in building **KindStep**, an AI-powered assistive mobile application for visually impaired individuals, built with **Flutter/Dart**.
- Implemented the **voice interaction module** using speech-to-text conversion, routing user commands to navigation, text reading, and Q&A sub-modules.
- Integrated JSON-based Q&A handling and coordinated with teammates on **object detection (YOLO)** and **OCR** pipelines.
- Tested and refined speech recognition accuracy and command normalization to ensure robust real-world performance.

Backend Developer

Banker Way

Beirut, Lebanon

Jun 2025 – Aug 2025

- Developed and maintained **core banking systems** using **Temenos T24** and **Java**, ensuring regulatory compliance, scalability, and operational efficiency.
- Designed backend modules for **transaction processing**, customer account management, and financial reporting.
- Integrated third-party APIs into the T24 environment, expanding system interoperability.
- Resolved performance bottlenecks and optimized reliability for high-volume transaction workloads.

Web Engineer

LOOP

Remote

Sep 2024 – Feb 2025

- Built LOOP's official website with a **responsive user interface** using **HTML**, **CSS**, and **React.js**.
- Connected dynamic sections to a centralized database for real-time updates and implemented backend logic for event registration and collaboration tools.
- Collaborated with designers and developers to maintain a consistent and engaging cross-platform experience.

PROJECTS

- Trade Order Management System (OMS)** | *Java, OOP, MySQL, JDBC, JUnit* | [GitHub](#) 2026
- Built a **fintech-grade order management system** in Java simulating real stock exchange mechanics — order submission, matching, trade execution, and portfolio tracking.
 - Implemented a **Price-Time Priority matching engine** using **PriorityQueues** to handle partial fills, full fills, and order cancellations across multiple instruments concurrently.
 - Applied three core **design patterns**: **Factory** for order creation, **Observer** for real-time status notifications, and **Strategy** for swappable matching algorithms.
 - Designed a **layered architecture** (Model → Repository → Service → Engine) with full **JDBC + MySQL** persistence and a **Singleton** DB connection manager.
- Gocart: Multi-Vendor E-Commerce Platform** | *PostgreSQL, Express.js, React.js, Node.js* | [GitHub](#) 2026
- Built a full-stack **PERN-stack** multi-vendor e-commerce platform with an **AI-powered product generation** feature and an **admin dashboard** for store and user management.
 - Implemented **secure Google Sign-In**, multiple payment methods, a coupon system, a Plus Membership subscription model, and a ratings & reviews engine.
- Billo: Mobile Money Transfer App** | *React Native* | [GitHub](#) 2026
- Built a cross-platform **React Native** mobile app enabling peer-to-peer money transfers with user authentication, transaction flows, and account management.
- Government Services Portal** | *PHP, Laravel, MySQL* | University Project 2025
- **Led a team of 4** in delivering a government-facing web portal using **Laravel** resource controllers, MySQL, and Blade templating within academic deadlines.
 - Handled project coordination, feature scoping, and code reviews, applying **MVC patterns** and relational database design throughout.
- Face Recognition Check-In System** | *Python, OpenCV, Deep Learning* | [GitHub](#) Jun – Aug 2024
- Built an automated attendance system using **facial recognition**, identifying and logging individuals in real time with deep learning-based face embeddings.
 - Designed the full pipeline from image capture and preprocessing to real-time identification and logging.
- Movie Recommendation System** | *Python, Scikit-learn, Pandas, NLP* | [GitHub](#) Sep 2024
- Built a **content-based recommendation engine** using TF-IDF vectorization and cosine similarity over a large cleaned movie dataset.

CERTIFICATIONS & COURSES

- NVIDIA Deep Learning Institute** In Person
- Fundamentals of Deep Learning* Apr 2024
- * Covered neural network architectures, CNNs, data augmentation, transfer learning, and model optimization using **PyTorch** and NVIDIA GPUs.
- DeepLearning.AI: Coursera**
- Machine Learning Specialization* 2025
- * Completed a 3-course specialization covering supervised learning, unsupervised learning, and reinforcement learning fundamentals with practical labs in Python.
- DataCamp**
- Supervised Learning with Scikit-Learn* 2026
- * Covered classification and regression models, hyperparameter tuning, cross-validation, and ML pipelines using Scikit-learn.

President

AI Society – Antonine University

Apr 2025 – Present

- * Led the AI Society at Antonine University, organizing workshops, technical sessions, and community events to promote AI literacy among students.

Ambassador

IEEE Student Branch – Antonine University

2024 – Present

- * Represented Antonine University at **IEEE Xtreme 19.0**, one of IEEE's global competitive programming challenges.

Ambassador

DeveLeb

Jun 2024 – Present

- * Promote tech education and developer community growth across Lebanon as a DeveLeb campus ambassador.

Ambassador

Code With Serah

Apr 2025 – Present

- * Support coding education initiatives and mentor aspiring developers through Code With Serah's community programs.

SKILLS

Programming: Java, C++, C, C#, Python (Pandas, NumPy, Scikit-learn, Matplotlib, PyTorch, TensorFlow, Keras), JavaScript (React.js, Next.js, Node.js, Express.js), TypeScript, PHP (Laravel), Git/GitHub.

Databases: SQL, MySQL, PostgreSQL, MongoDB, NoSQL, PL/SQL.

Backend & Architecture: REST APIs, MVC Architecture, OOP, Design Patterns, JDBC, FastAPI, Django, Maven.

Mobile: Flutter/Dart, React Native.

Web: HTML5, CSS3, Figma, Canva, Microsoft Office.

Deployment & Cloud: Docker, CI/CD pipelines, Vercel, Netlify, Render, Azure Cloud, Azure AI Services, N8N.

AI/ML: Computer Vision (YOLO, OpenCV), NLP, Generative AI, Prompt Engineering, Remote Sensing, Geospatial Analysis (Sentinel-2, GIS).

Soft Skills: Leadership, Communication, Mentoring, Analytical Thinking, Event Management, Teamwork.

Languages: English (Fluent), Arabic (Native), French (Fluent).
